

# Multilingual Visual Sentiment Concept Matching

Nikolaos Pappas, Miriam Redi, Mercan Topkara, Brendan Jou, Hongyi Liu, Tao Chen, Shih-Fu Chang

IDIAP

Yahoo

JWPlayer

Columbia University

# Motivation

good food, English

好食物, Chinese

lekker eten, Dutch

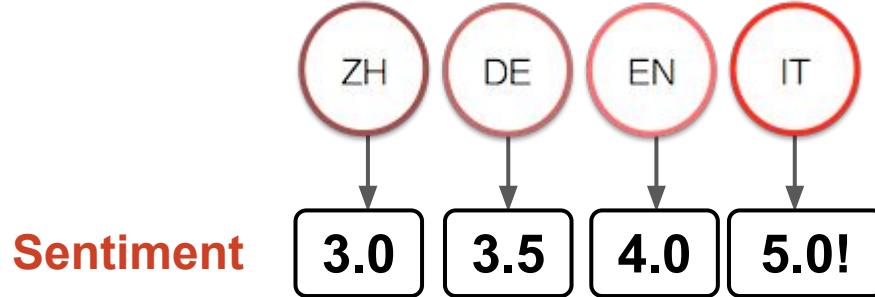

- How to analyze and retrieve multimedia data generated by a diverse, multicultural population?
- What are the lexical and visual differences of similar concepts across languages? How do different cultures use images to express sentiment and emotions?

# Applications

Multilingual sentiment analysis of images

**MVSO**

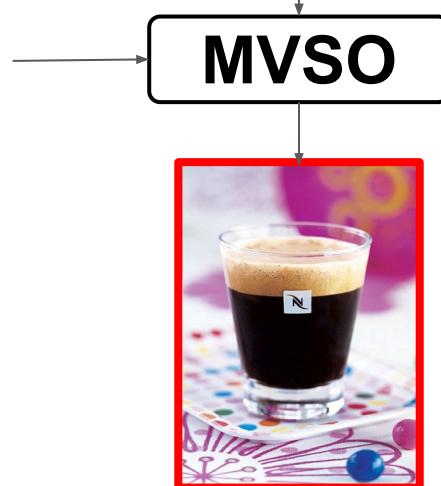

# Applications

Target image selection  
based on cultural  
characteristics of the  
audience

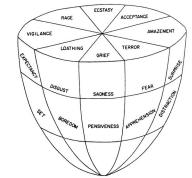

Target Concept

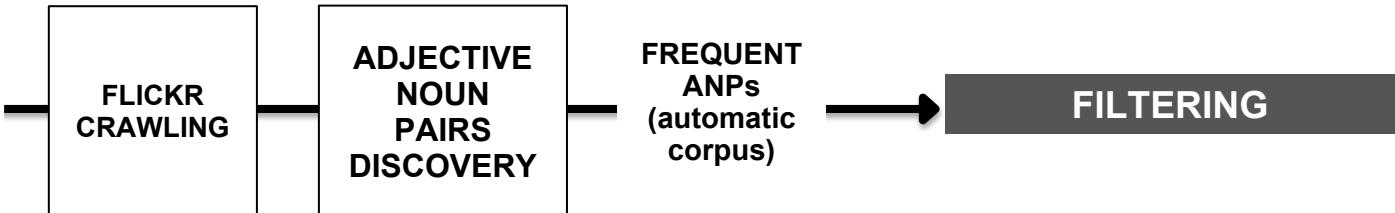

# Challenges

- How to **collect** multilingual sentiment-biased images and metadata? **MVSO!**
- How do different languages **describe** visual emotions? **MVSO!**
- How to **compare and analyze visual concepts across languages?** **THIS WORK**

# Multilingual Visual Sentiment Ontology (MVSO)

EMOTION KEYWORDS  
[Plutchik 1980]

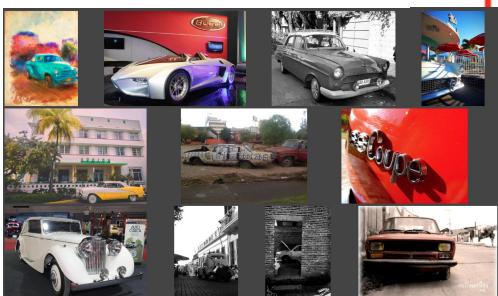

ORGANIZED COLLECTION OF  
MULTILINGUAL AFFECTIVE VISUAL  
CONCEPTS: ANPs

ADJECTIVE-NOUn PAIRS

Affective content, 12 languages, semantically consistent

**ANP = ADJECTIVE NOUn PAIR**

Brendan Jou, Tao Chen, Nikolaos Pappas, Miriam Redi, Mercan Topkara, Shih-Fu Chang  
***Visual Affect Around the World: A Large-scale Multilingual Visual Sentiment Ontology***  
ACM Multimedia 2015, Brisbane, Australia

# Discovering Multilingual Clusters

- Cultural insights based on semantically related concepts
- Each cluster reveals
  - Wording variation
  - Sentiment variation
  - Visual content variation

**CHINESE** Sentiment: 3.2

传统\_服装

**ITALIAN** Sentiment: 4.8

Abbigliamento Tradizionale, Costume Tradizionale, Cappello Tradizionale

**ENGLISH** Sentiment: 4

*Traditional Clothing, Traditional Wedding, Traditional Wear, Traditional Costume, Traditional Dress, Fancy Dress*

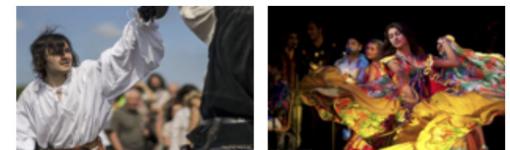

**SPANISH** Sentiment: 5

*Ropa Tradicional, Vestido Antiguo, Traje Tradicional, Vestimenta Tradicional*

**FRENCH** Sentiment: 4.6

*Robe Traditionnelle, Costume Traditionnel, Habit Traditionnel*

# Example: Western vs. Eastern languages

**FRENCH:** bateaux abandones (abandoned boats **sent:1.2**)

**ENGLISH:** old boats **sent:1.7**

**CLUSTER:**  
OLD BOAT  
ABANDONED BOAT  
ABANDONED SHIP

**SPANISH:** barco abandonado (abandoned boat **sent:1.0**)

**CHINESE:** 旧 船 (old boats, **sent:2.8**)

**RUSSIAN:** старая лодка (old boat, **sent:1.7**)

# Example: Culturally-unique clusters

- Cultural insights based on distinctive concepts
- Each cluster reveals
  - Uniqueness
  - Expressivity
  - Cultural specificity

**SPANISH**  
monumento artístico  
(artistic monument)

políticos corruptos  
(corrupt politicians)

**ITALIAN**  
carnevale ambrosiano  
(ambrosian carnival)

evasione fiscale  
(tax evasion)

**FRENCH**  
cirque aérien  
(aerial circus)

**CHINESE**  
传统 灯笼  
(traditional lantern)

**ARABIC**  
قضية انسانية  
(humanitarian issue)

# Proposed Framework

1. Translate each original ANP into English
2. Use word embeddings to convert ANPs to vectors and cluster

## MVSO Concepts

### ENGLISH

old boats  
happy dog  
healthy coffee  
...

### FRENCH

bateaux abandonnes (abandoned boats)  
chien heureux (happy dog)  
corps sain (healthy body)  
...

### GERMAN

verlassene gebäude (abandoned building)  
glücklicher hund (happy dog)  
gesunde ernährung (healthy eating)  
...

### ITALIAN

casa abbandonata (abandoned building)  
cane divertente (funny dog)  
cibo\_sano (healthy food)  
...

### DUTCH

oude gebouw (old building)  
mooie kat (lovely cat)  
...

### SPANISH

barco abandonado (abandoned boat)  
perro feliz (happy dog)  
desayuno saludable (healthy breakfast)  
...

### CHINESE

旧船 (old boat)  
可爱 狗 (cute dog)  
健康 生活 (healthy lifestyle)  
...

### RUSSIAN

старая лодка (abandoned building)  
здоровое питание (healthy eating)  
...

### TURKISH

eski evler (old houses)  
...

### POLISH

stary budynek (old building)  
...

### ARABIC

قصر قديم (abandoned palace)  
...

### PERSIAN

بیت مهجور (abandoned house)  
...

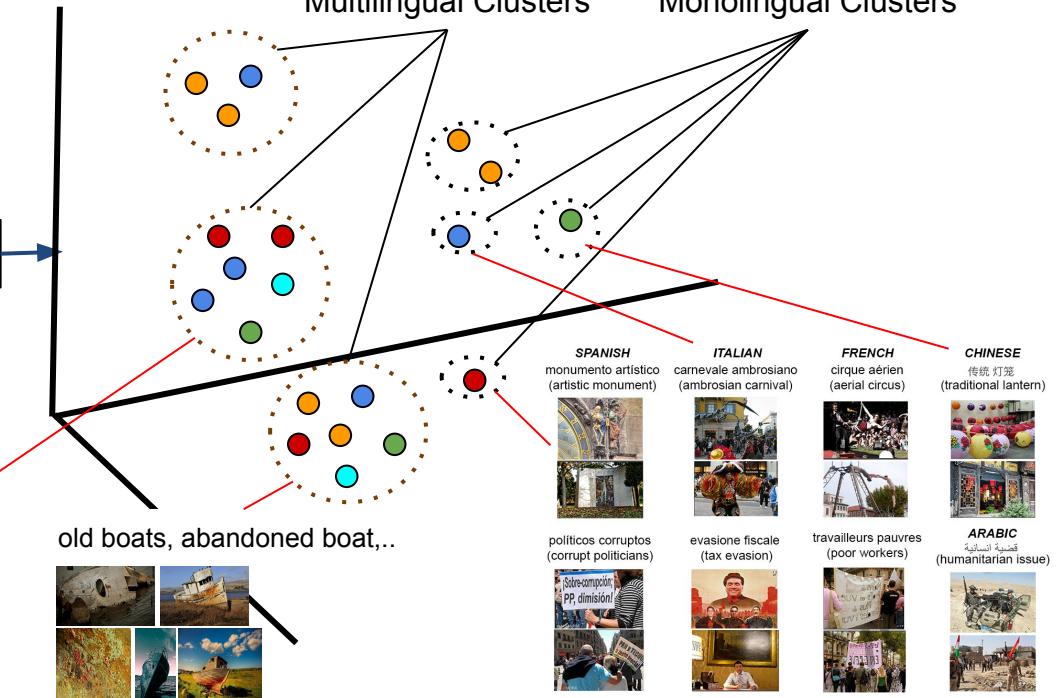

## Concept Matching

healthy breakfast, health coffee, ...

## Concept Clustering

# **DATA**

# Multilingual Visual Sentiment Ontology (MVSO) Data

- 7.36M+ Flickr images
- ~16K affective visual concepts: Adjective-Noun Pairs (ANPs)
- Co-occurrence (emotion, ANP)
- Sentiment value (text-based)
- 12 languages detected

Italian

Treno storico

Bella giornata

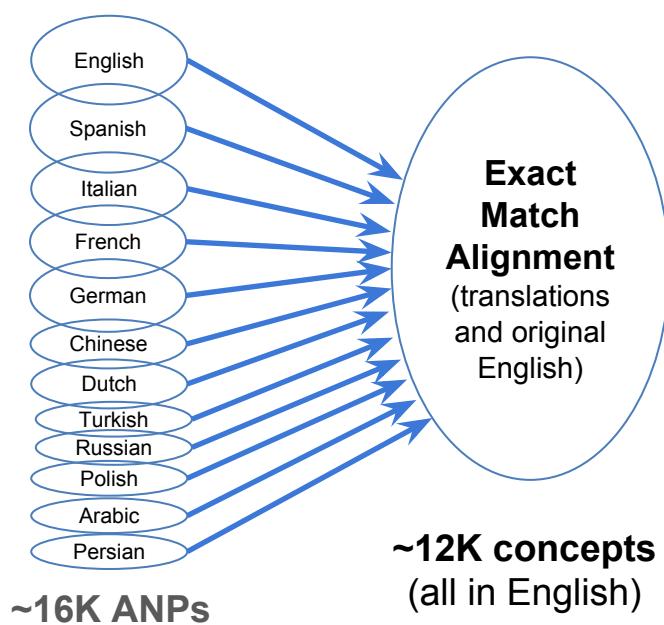

Treno veloce

Language	Concepts	Images
English	4421	447997
Spanish	3381	37528
Italian	3349	25664
French	2349	16807
Chinese	504	5562
German	804	7335
Dutch	348	2226
Russian	129	800
Turkish	231	638
Polish	63	477
Persian	15	34
Arabic	29	23

# **CONCEPT MATCHING**

# Exact Concept Matching with English Translation

Reflection of what we would see depending solely on translation to understand other cultures and their interpretation of concepts (*wedding, new year, traditional costumes*)

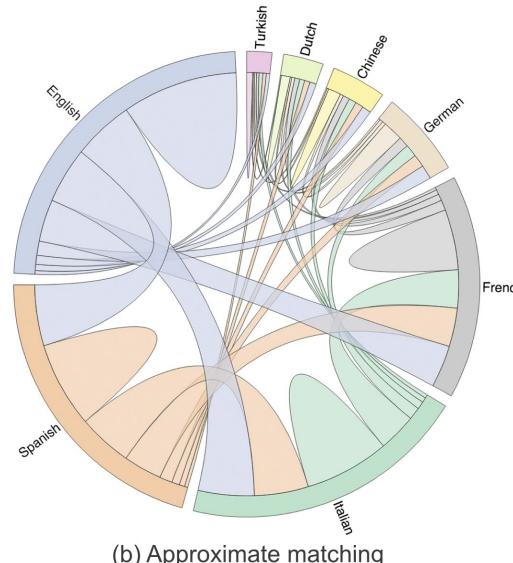

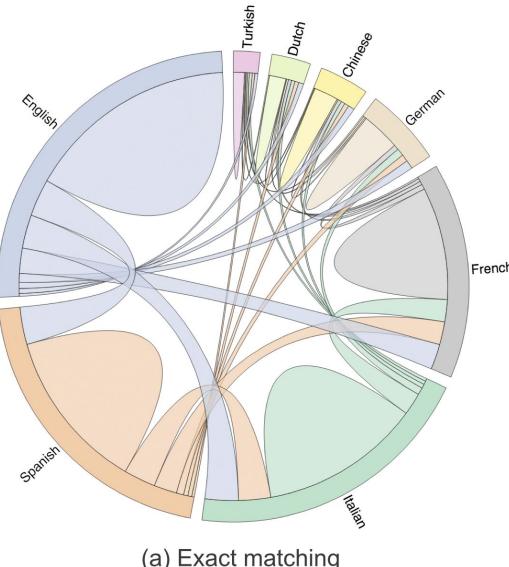

cane divertente (IT)  
chien drôle (FR)  
funny dog (EN)  
komik köpek (TR)  
perro gracioso (ES)

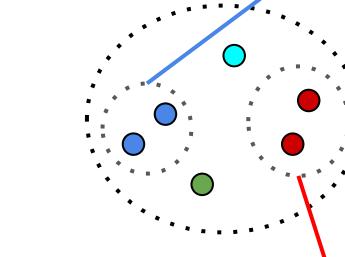

# Limitations of Exact Concept Matching

- Low ratio of crosslingual related concepts
  - 9.8K ANPs in monolingual clusters with exact matching based alignment
  - Number of monolingual clusters was below 2.5K with all approximate matching clustering methods

**SPANISH:** desayuno saludable (healthy breakfast)

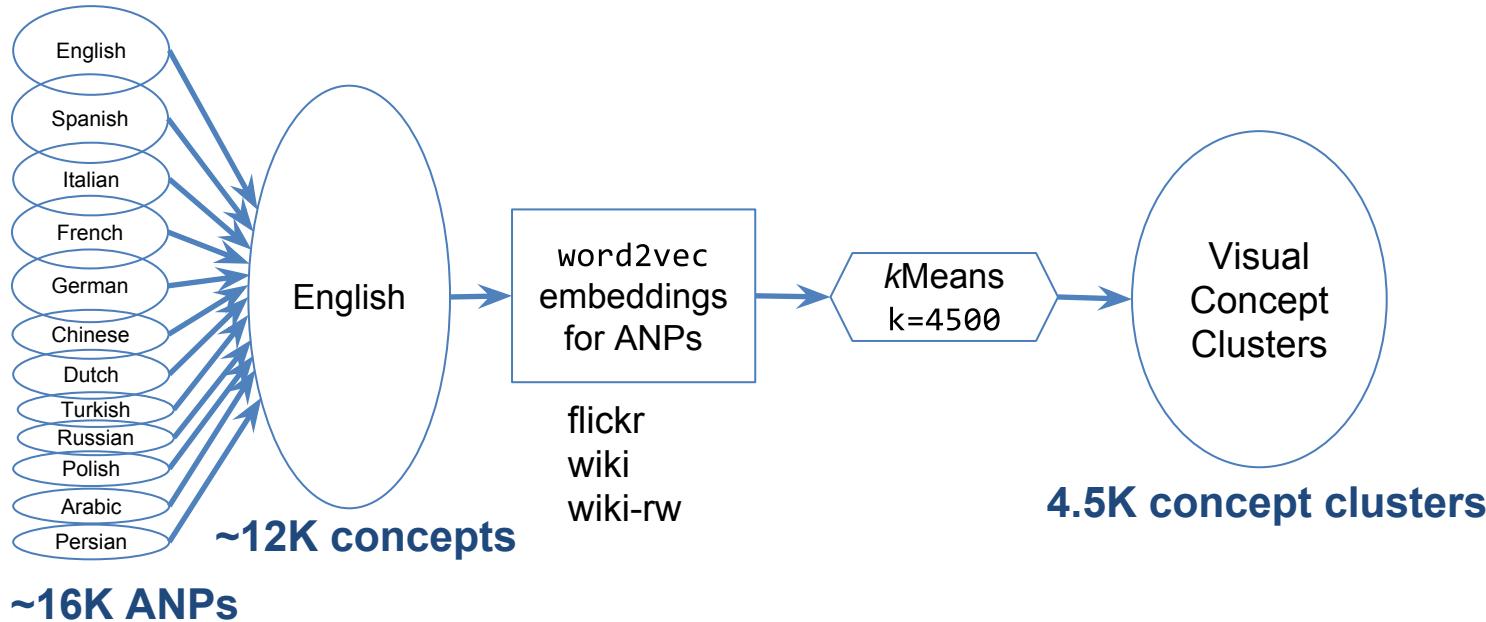

**ENGLISH:** healthy coffee

# **CONCEPT CLUSTERING**

# Approximate Multilingual Concept Matching

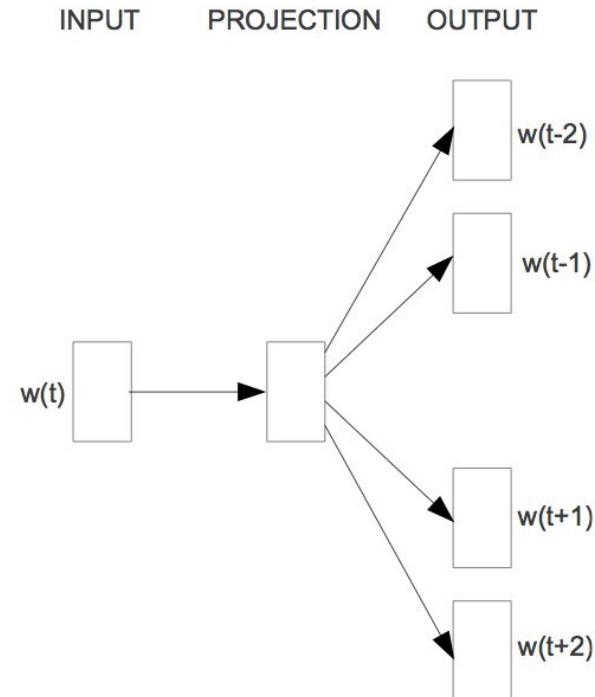

**Single-stage:** Use embeddings that are directly learned keeping ANPs as single tokens

$k$  value is decided using inertia, sentiment and semantic consistency

# Word Embedding Model

- Skip-gram model (word2vec)<sup>1</sup>
  - Google News 100B
  - Wikipedia 1.74B
  - Wikipedia + Reuters + WSJ 1.96B
  - Flickr 100 Million 0.75B
- Concept vectors
  - Sum of words composition
  - Directly learned (ANPs as tokens)

<sup>1</sup> Tomas Mikolov, Ilya Sutskever, Kai Chen, Gregory S. Corrado and Jeffrey Dean  
**Distributed Representations of Words and Phrases and their Compositionality**  
NIPS, Lake Tahoe, Nevada, USA, 2013

# Approximate Concept Matching: Two-stage

- **Noun-first clustering:** concepts that talk about similar objects
- **Adjective-first clustering:** concepts about closely related emotions
- Ontologies to easily explore the dataset

## Noun-first clustering

yard flowers  
summer spring lawn  
garden

romantic garden  
ecological garden **beautiful garden**  
celestial garden

rainy spring  
rainy summer

## Adjective-first clustering

joyous  
beautiful happy  
floral

festive  
delightful

delightful roses  
beautiful flowers **beautiful garden**  
beautiful butterfly

happy wedding  
happy marriage

# We matched multilingual concepts...

**CHINESE** Sentiment: 3.2

传统\_服装

**ITALIAN** Sentiment: 4.8

Abbigliamento Tradizionale, Costume Tradizionale, Cappello Tradizionale

**ENGLISH** Sentiment: 4

*Traditional Clothing, Traditional Wedding, Traditional Wear, Traditional Costume, Traditional Dress, Fancy Dress*

**SPANISH** Sentiment: 5

Ropa Tradicional, Vestido Antiguo, Traje Tradicional  
Vestimenta Tradicional

**FRENCH** Sentiment: 4.6

Robe Traditionnelle, Costume Traditionnel, Habit Traditionnel

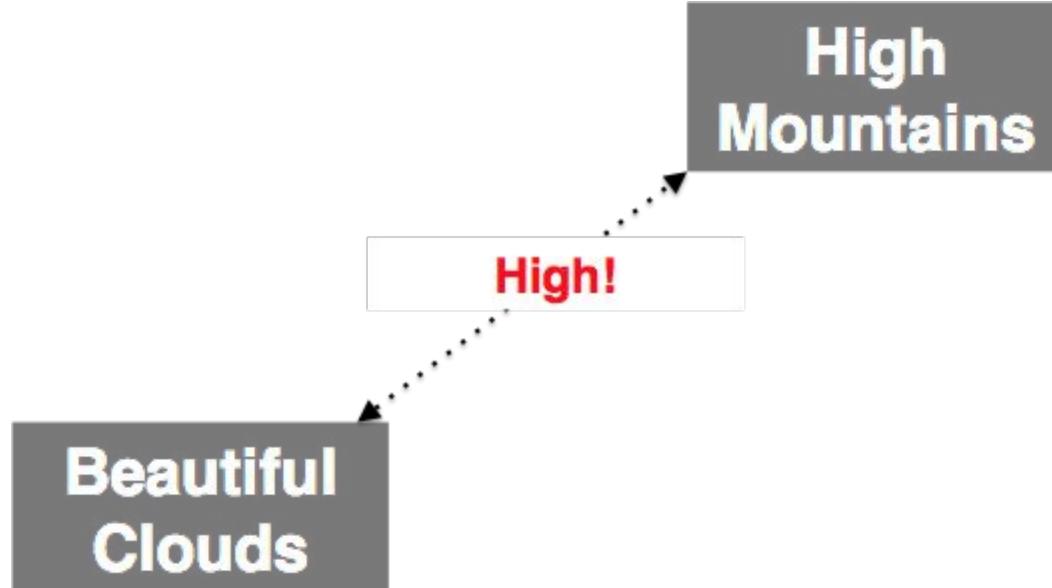

... but how do we evaluate the clustering methods?

- Semantic consistency
- Sentiment consistency

# **EVALUATION**

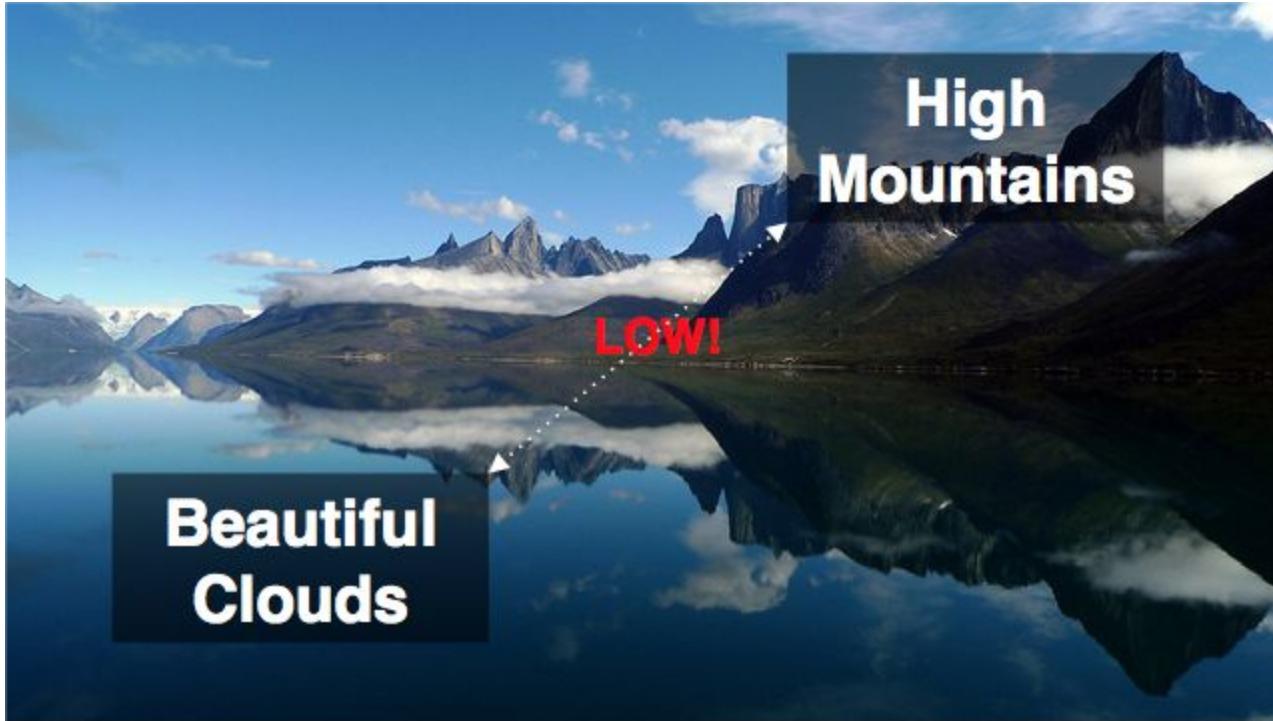

## **SEMANTIC CONSISTENCY**

# Clustering Evaluation: Visual semantic relatedness

Semantic distance

# Clustering Evaluation: Visual semantic relatedness

Visually-grounded semantic distance

# Clustering Evaluation: Visual semantic relatedness

- How often do two visual concepts appear together?
  - Tag co-occurrence matrix ( $n \times n$ )
- ANPs can be described as
  - Co-occurrence vectors  $h_i, h_j$  in  $\mathbb{R}^n$ 
    - $n$  is the number of translated ANPs

- **Visual semantic distance between ANPs**

$$d(ANP_i, ANP_j) = 1 - \text{cosine}(h_i, h_j)$$

# Clustering Evaluation: Semantic consistency

Visual **Semantic** Relatedness for different clustering methods

For each clustering method:

$$\text{sem}_C = \frac{1}{C} \sum_{c=1}^C \frac{\sum_{j:j \neq i \& U_{ij} \neq 0}^{|\{i, \dots, N_c\}|} d(\text{ANP}_{c,i}, \text{ANP}_{c,j})}{N_c}$$

Average over all clusters

Average visual semantic distance in a cluster for all ANP pairs whose semantic distance is greater than 0

**C** = number of non-unary clusters

**N<sub>c</sub>** = number of ANPs for a cluster c

Inter-cluster distance was not significantly different

# **EVALUATION**

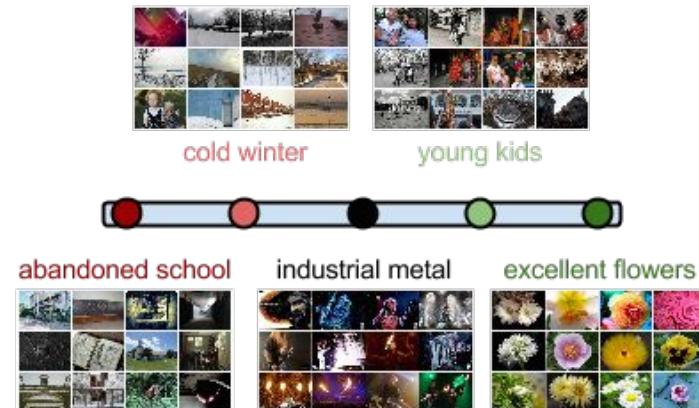

## **SENTIMENT CONSISTENCY**

# Clustering Evaluation: Visual sentiment of concepts

Visual **Sentiment** Consistency for different clustering methods

## MULTIMODAL CROWDSOURCING EXPERIMENT

- 11 languages
- Native speakers
- Five grades
- Multimodal: Text + Images

# Clustering Evaluation: Sentiment consistency

Visual **Sentiment** Consistency for different clustering methods

For each clustering method:

$$\text{sen}_C = \frac{1}{C} \sum_{c=1}^C \frac{\sum_{i=1}^{N_c} (\text{sen}(\text{ANP}_{c,i}) - \boxed{\text{sen}_c})^2}{N_c}$$

Average over all clusters

Average sentiment in a cluster

Average visual sentiment error in a cluster

**C** = number of non-unary clusters

**Nc** = number of ANPs for a cluster c

# **EVALUATION RESULTS**

# Clustering Evaluation: Results on Full Corpus

Single-step clustering performs better than two-step clustering

Directly learned ANP representations better than word-based ones

Method	Embeddings	Sentiment Cons.	Semantic Cons.	Overall Cons.
2-stage_noun	gnews (w=5)	0.278	0.676	0.477
2-stage_adj	gnews (w=5)	<b>0.161</b>	0.614	0.388
1-stage	wiki-anp (w=10)	0.239	0.659	0.449
1-stage	wiki_rw-anp (w=10)	0.242	0.582	0.412
1-stage	flickr-anp (w=10)	0.242	<b>0.535</b>	<b>0.388</b>
1-stage	wiki-anp (w=5)	0.239	0.659	0.449
1-stage	wiki_rw-anp (w=5)	<b>0.234</b>	0.579	0.407
1-stage	flickr-anp (w=5)	0.246	0.532	0.389

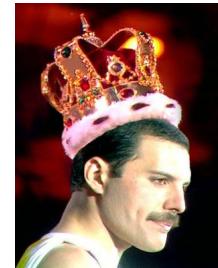

# Application: Portrait concept clustering

Pictures of people are different from other photographs.

- Faces grasp human attention more than other subjects  
(neuroscience, computational social science)
- Eastern and Western Languages assign emotions differently (psychology theory)

Gorgeous girl

Grandi Persone

Ojos Lindos

Regarde Triste

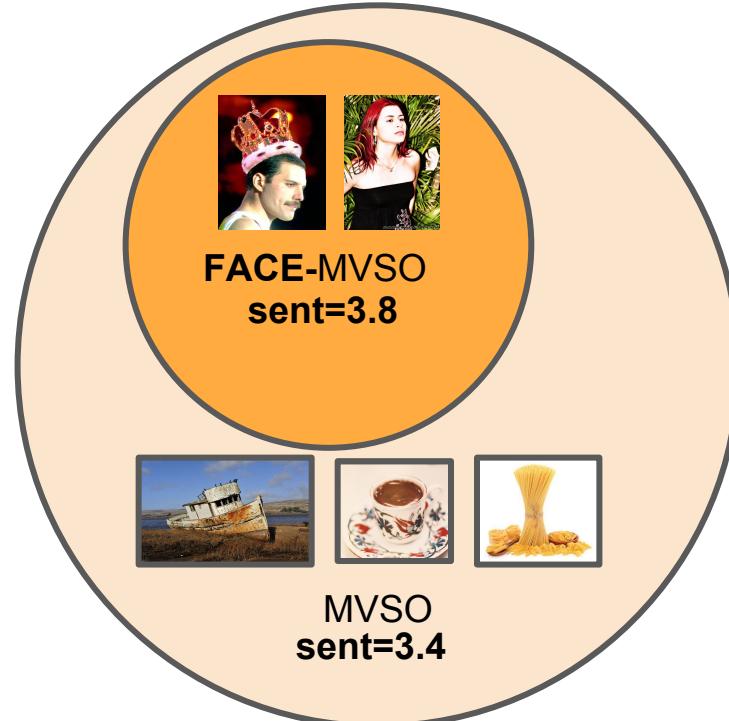

Güzel Kız

# Application: Portrait concept clustering

## Portrait-Based Sentiment Ontology using Face Detection

- Face ANPs (~2K, 3M images) have higher sentiment!
- **Highest** sentiment difference: **Chinese** 3.6 → 4.3 (+~20%)
- **Lowest** sentiment difference: **Turkish** 3.6 → 3.5 (-0.3%)

# Clustering Evaluation on Face-ANPs: Results

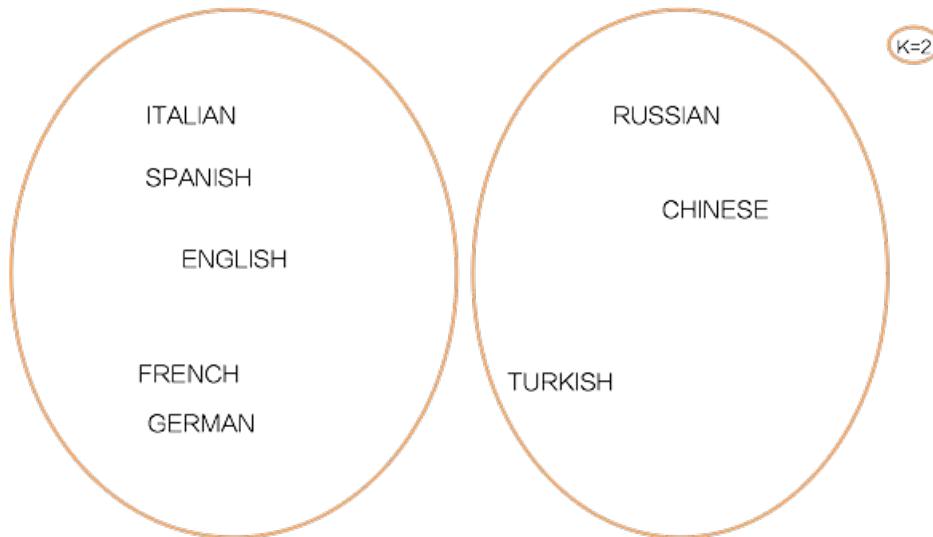

- Similar results as full corpus
- **Clusters with more languages → Higher sentiment!**
- Different Sentiment for different languages (Eastern vs. Western)

Method	Embeddings	Sentiment Cons.	Semantic Cons.	Overall Cons.
2-stage_noun	wiki (w=5)	0.534	0.586	0.56
2-stage_noun	wiki_rw (w=5)	0.510	0.614	0.562
2-stage_noun	flickr (w=5)	0.526	<b>0.513</b>	0.519
2-stage_noun	gnews (w=5)	0.309	0.569	0.439
2-stage_adj	wiki (w=5)	0.581	0.930	0.755
2-stage_adj	wiki_rw (w=5)	0.472	0.560	0.516
2-stage_adj	flickr (w=5)	0.455	0.519	0.487
2-stage_adj	gnews (w=5)	<b>0.178</b>	0.522	<b>0.350</b>
1-stage	wiki-anp (w=10)	<b>0.240</b>	0.576	0.408
1-stage	wiki_rw-anp (w=10)	0.257	0.508	0.382
1-stage	flickr-anp (w=10)	0.262	<b>0.489</b>	<b>0.375</b>
1-stage	wiki-anp (w=5)	0.250	0.583	0.416
1-stage	wiki_rw-anp (w=5)	0.281	0.522	0.402
1-stage	flickr-anp (w=5)	0.280	0.502	0.391

# Application: Portrait concept clustering

Which languages are most similar when talking about faces?

Language representation: distribution of ANPs over 1000 clusters

Two clusters:  
**Eastern vs. Western**  
As seen in previous psychology  
studies

# Application: Portrait concept clustering

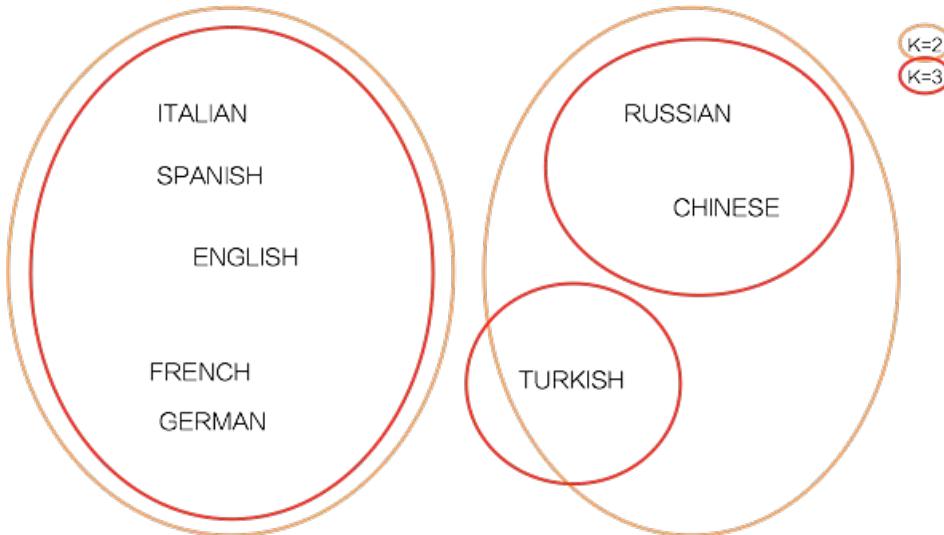

Which languages are most similar when talking about faces?

Two clusters:  
**Eastern vs. Western**  
As seen in previous psychology studies

# Application: Portrait concept clustering

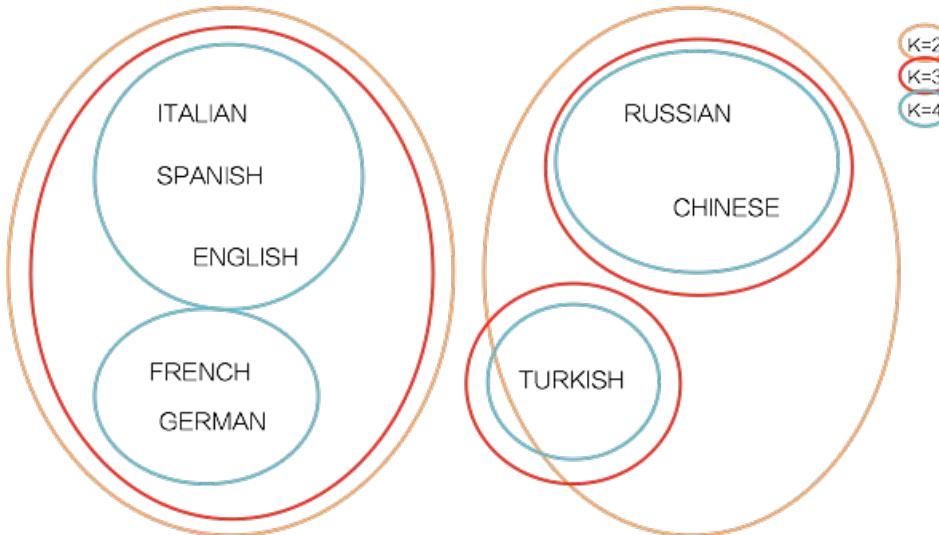

Which languages are most similar when talking about faces?  
Language representation: distribution of ANPs over 1000 clusters

Three clusters:  
**Turkish detaches from the  
Eastern cluster**

# Application: Portrait concept clustering

Which languages are most similar when talking about faces?  
Language representation: distribution of ANPs over 1000 clusters

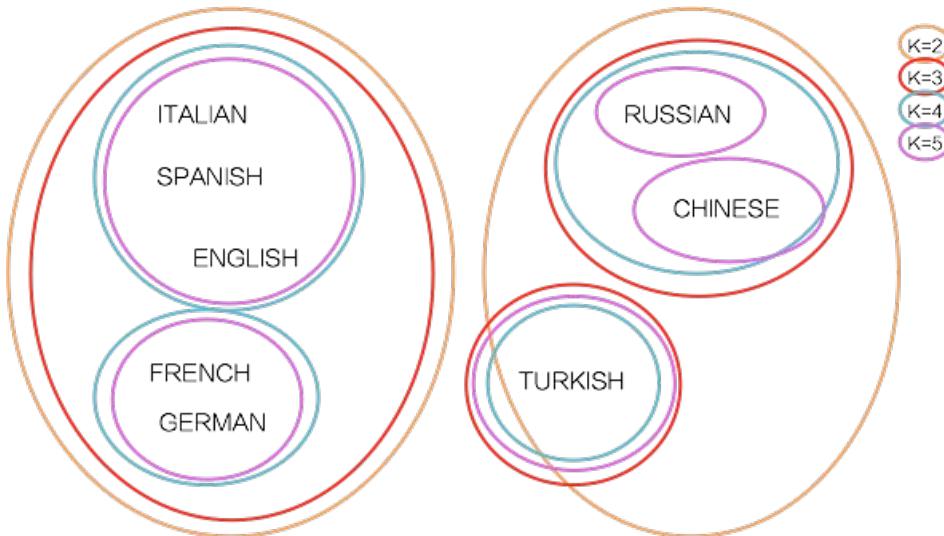

Four clusters:  
**French/German**  
**vs**  
**Italian/Spanish/English**

# Application: Portrait concept clustering

Which languages are most similar when talking about faces?

Language representation: distribution of ANPs over 1000 clusters

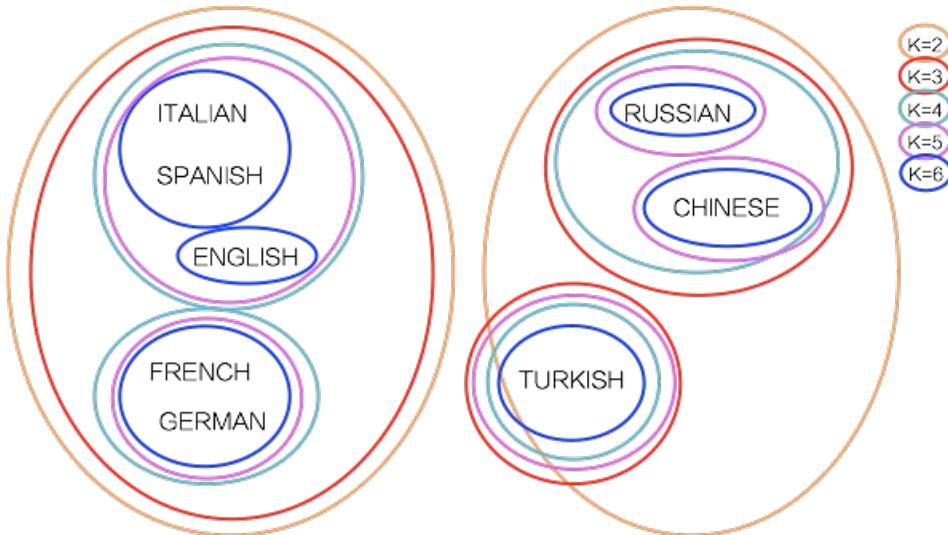

Five clusters:  
**Three Eastern languages are separated**

# Application: Portrait concept clustering

Which languages are most similar when talking about faces?

Language representation: distribution of ANPs over 1000 clusters

Six clusters:  
**Italian stays with Spanish**  
**French with German**  
**English as a single cluster**

# Summary

- **Domain consistency**
  - Word embeddings trained on a visually grounded corpus (Flickr) improve cluster quality for ANPs mined from visually grounded data
- **Single-token clustering**
  - Clustering adjectives noun pairs as single tokens proved merit
- **Visual semantic relatedness**
  - Measuring relatedness by tag co-occurrence is an effective evaluation for semantic visual grounding
- **Crowdsourced ANP sentiment**
  - Gathered a crowdsourced dataset of multimodal sentiment by ANPs
- **Eastern vs. Western**
  - We automatically discovered interesting and intuitive cultural differences

Question: What's Next?

- Use semantically aligned representations instead of translating to pivot
- Visually align ANP representations based on tag co-occurrence
- Improve detection, visual sentiment prediction and recommendation
